Heavy duty protection

# Keep your home or business protected every day

## Window, door, and patio applications

- Storm Protection
- Security
- Energy Savings
- Light Control
- Privacy
- Noise Reduction
- UV Protection
- Automation

## Key Components

### Maximum Strength

SecuraMax was designed with the strength and durability required to protect your home, business, or high security risk from wind borne debris and hurricane force winds.

### Code Approved

SecuraMax shutters are tested to the highest standards in the United States. Approved by the Texas Department of Insurance, Miami Dade County, and the Florida Building Code.

### End Retention System

The end retention system is a special option for maximum protection. During strong winds, the curtain engages in the rails and cannot be pulled out by hurricane force winds. (Available on RLL55-X Slat)
