Foam Filled Security Shutters

# Enjoy the daily benefits of window, door, and patio applications

- Security
- Energy Savings
- Storm Protection
- Light Control
- Privacy
- Noise Reduction
- UV Protection
- Automation

## Quality

Rollac uses a special PU/PA surface coating that is engineered for rolling shutter profiles. Also, all our DuraComfort shutters are made with an environmentally friendly foam core, available in high strength for improved rigidity. The foam provides stability, conserves energy and absorbs noise.

## Strength

Rollac uses strong aluminum profiles that are suited for the US market. The profile's aluminum wall gauge of 0.43 mm provides mechanical strength and durability. This is ideal for the extreme weather conditions and enhanced security requirements in the USA.

## Innovation

Rollac's special Thermal Paint is a special top coat that reduces heat absorption, even when coated with dark colors by selectively reflecting solar energy. This keeps the surface up to 10 degrees cooler, conserving additional energy and reducing thermal stresses in extreme weather condition.
