

FIRE SENSE

by *Mangeny Controls Inc.*

The strength of roll down shutters makes them the ultimate for storm and personal property protection. But that strength that you rely on also creates a barrier for emergency personnel trying to access your home or building. In emergency situations, time is of the essence. The national average response time of EMS in an urban area is under 15 minutes. In a fire victims can succumb to carbon monoxide poisoning and other toxic gas related injuries within minutes. You don't want first responders to waste precious time cutting through a shutter just to gain access your home.

Fire Sense works with any smoke detector. When the smoke alarm is triggered, Fire Sense will automatically open your shutters allowing first responders access to your home and allowing you and your family to escape to safety.

Patent Pending

Don't let a closed shutter be the difference between life and death.
