Towards Superior Technology and Higher Environmental Standards

Rollac Rolling Shutters is a leading manufacturer of rolling shutters. With more than 30 years of experience, we believe that technology and quality service are the driving forces behind our rolling shutters. We take pride in the fact that we are the only company in North America that manufactures rolling shutters from raw materials to finished solutions.

Using the latest technology at hand, all our solutions are engineered in house and suited to accommodate the American market. If you need a rolling shutter to protect from solar heat gain, a shield for security, or Miami Dade wind storm protection, Rollac Rolling Shutters provides the right solution.

Buildings consume 39% of all energy and are also the largest source of carbon dioxide emission in the USA. Therefore, we at Rollac strive to engage in environmentally responsible practices and pledge to integrate principles of sustainability into our rolling shutters and our day to day operations.

Rollac works with NFRC and the US Green Building Council to develop ratings for exterior shading products and make them part of the Green Building movement. Rollac is also a proud energy star partner and commits to enhanced energy performance while demonstrating environmental leadership. Amongst the many benefits of our rolling shutters is their ability to provide shading, which in turn conserves energy and reduces greenhouse gas emissions. Cleverly designed and correctly used, our solar shading systems significantly reduce energy consumption in our own buildings and lead a path to environmental responsibility.

We consider it our responsibility to have a leading role in the industry and are proud to partner with experts and organizations that contribute to our knowledge of sustainability.

Energy Savings

Light Control	Full sun to instant darkness at the touch of a button.
U.V. Protection	Prevent fading of wood, furniture, fabrics & artwork.
Noise Reduction	Reduce unwanted noises from the outside.
Improves your windows solar heat gain coefficient by up to 98%	
Improves your windows U-value by up to 48%	

Rollac Rolling Shutters allow you to enjoy a more comfortable indoor environment. Rolling shutters prevent your interior home from overheating and thermal discomfort. Rolling shutters are also real energy savers for your home. During hot summer days, they provide a shield in front of your window and keep the heat outside. Heat that is kept outside doesn't need to be cooled down anymore and thus saves energy. During the winter time, keep your rolling shutters up and let solar heat warm your room naturally.

Rollac DuraComfort solutions are made of aluminum foam filled profiles. This makes them durable and long lasting for every climate in the United States. You can select from a great color variety that will integrate well into your architecture. Also, DuraComfort solutions come with optional light slits in your profile for additional air ventilation and light support.

We recommend to automate your rolling shutters. If automated and intelligently controlled, rolling shutters will reduce energy consumption of your home and provide comfort with the touch of a button.

Rolling Shutter Solution DuraComfort

The DuraComfort is the economical solution designed for comfort, privacy, and energy savings.

How do burglars gain entry into a home?

Building Security

Mechanical Security Options

Strong Profile

Guide Rails

Anti Push Device

End Retention System

Rollac Rolling Shutters provide more than energy efficiency and thermal comfort. They yield security. Many burglars spend no longer than 60 seconds in attempting to enter a home. Rollac Rolling Shutters secure vital areas in a home or building that are susceptible to entry by force.

Rollac's product design and development is composed to enhance the security of a home. Strong security profiles are built to withstand impact, enhanced guide rails prevent slat curtain from tearing out. An optional anti push up device restricts the shutter from being rolled up. In addition, an end retention system available for the Apex A 55 solution provides maximum security by locking slat into the rails, eliminating tear out.

But not only are SecuraSure solutions designed to provide Building Security, SecuraSure can also be used in high wind or hurricane prone areas. Their strong profiles have been tested for wind velocity pressure and wind borne debris impact. Thus, Rollac SecuraSure foam filled solutions meet the stringent standards of Florida Building Code, Texas Department of Insurance, and Miami Dade County. Heighten Rollac Rolling Shutters with automation. Rollac's motorized remote solutions allow convenient opening and closing of shutters and facilitate operating comfort and security.

Rolling Shutter Solution SecuraSure

SecuraSure is the perfect system for residential security and hurricane protection. The high density foam enhances the level of strength, while our unique aluminum construction upholds the high standard of quality evident in all Rollac products.

Rollac Rolling Shutters solution SecuraMax is specially designed to protect from the damaging effects of destructive winds, rain and storm induced debris from penetrating windows, doors, or other exposed openings in a home. Rollac's SecuraMax solutions maximize the security and value of a home.

Rollac Rolling Shutters open and close seamlessly, to protect a home in seconds with automated solutions. Choose from a SecuraMax double-walled aluminum slat. Rollac SecuraMax solutions also feature an optional end retention system that provides maximum security by locking our durable security profiles into place.

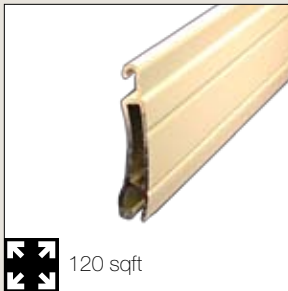

Rollac Rolling Shutters are tested against the most stringent standards in America: The International Building Code, Florida Building Codes, Texas Department of Insurance and Miami Dade County.

Rolling Shutter Solution SecuraMax

SecuraMax excels like no other shutter system for the heaviest storm protection. The extruded aluminum construction has been impact tested so it prevents flying debris from damaging windows and other openings.

Shutter Mounting Options

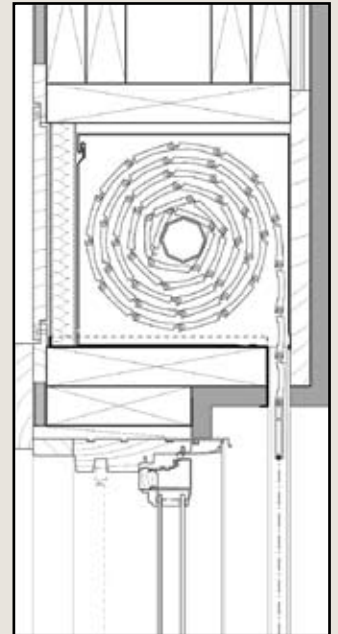

Ask your local sales representative about all the choices.

Retrofit - Installation outside the building.

In Soffit - Allows the box to be hidden for a lower profile shutter.

In Wall - When planned during the pre-construction phase, shutters can be installed in wall, hiding the box and rails for a near invisible application when the shutters are rolled up.
